

COURSE DAY 1

UI/UX Training for Engineers

November 2025

Everllence

WELCOME

Hello, we're Nanna
and Mathias.

What are your expectations for this course?

One expectation pr. card

Our expectations

Purpose

To empower you at Everllence to develop user-centric, design-inspired software solutions that **keep the end-user's needs and requirements at the forefront.**

Outcome

Our goal is to **equip you with concrete and practical tools and guidelines within user-centered design**, that you can implement in your daily work, enhancing the intuitive design of your systems.

We will touch upon

The Mindset

The principles and theory behind user-centric development

The Tools

Specific tools and methods that can be applied in the process of evaluating and rethinking systems

IT'S TIME FOR THE AGENDA

'Rules' for today

We start on time
Be aware of when breaks ends and when to be back

Ask Questions

Be curious and feel free to ask questions

Lean in

Get involved in the tasks and give it a shot - even when you feel unsure

Bring in the good energy

Take ownership of maintaining the good energy in the room, exploit the breaks and let us know if you need anything,

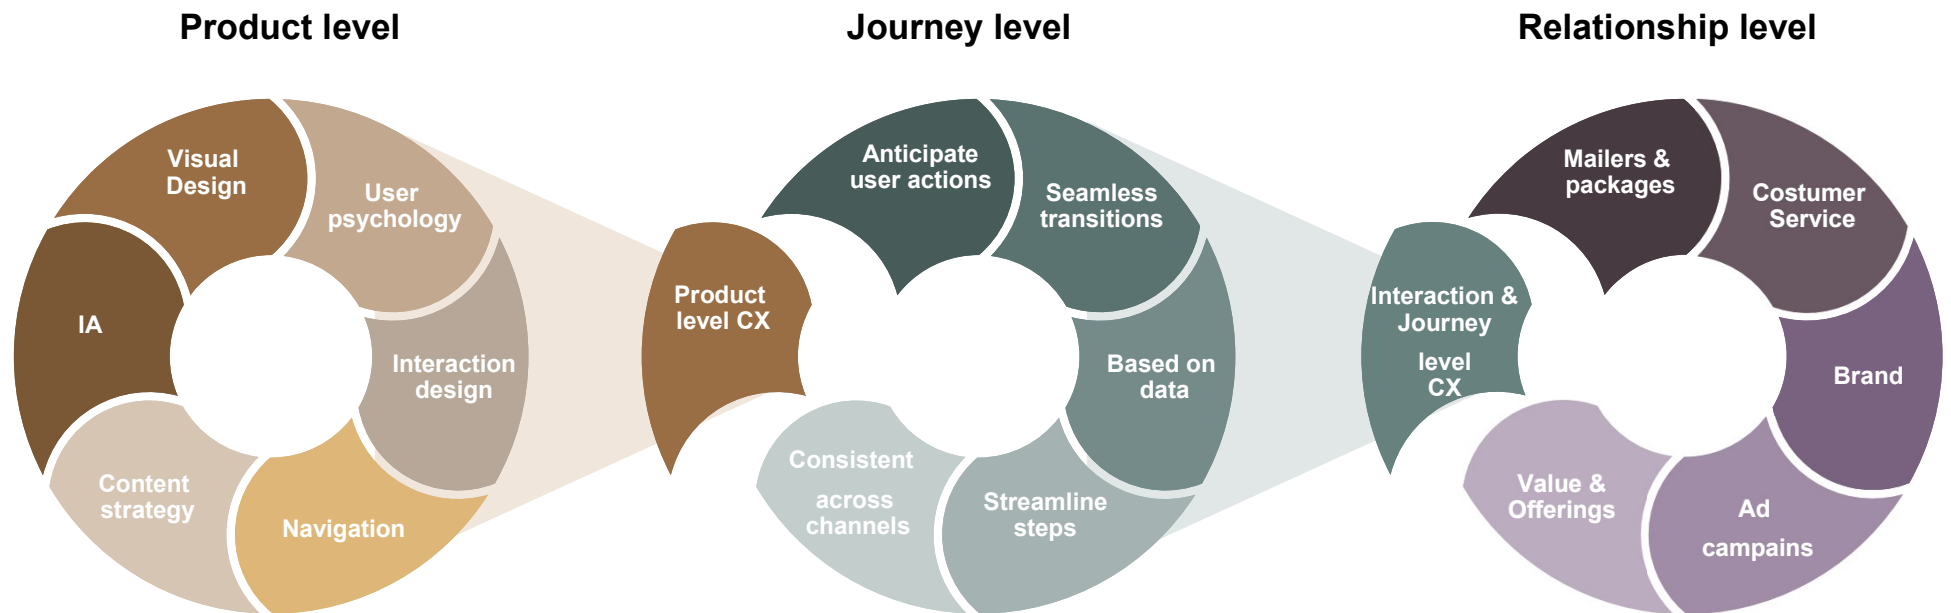

Stay focused

Only use laptops or phones if we ask you to during the tasks

Introduction to UX

UX (User Experience) is a **holistic framework**,
focusing on understanding and incorporating user needs,
in every stage of the development process.

A mindset with a broad toolkit depending on the user group and level of interaction **Everllence** ■

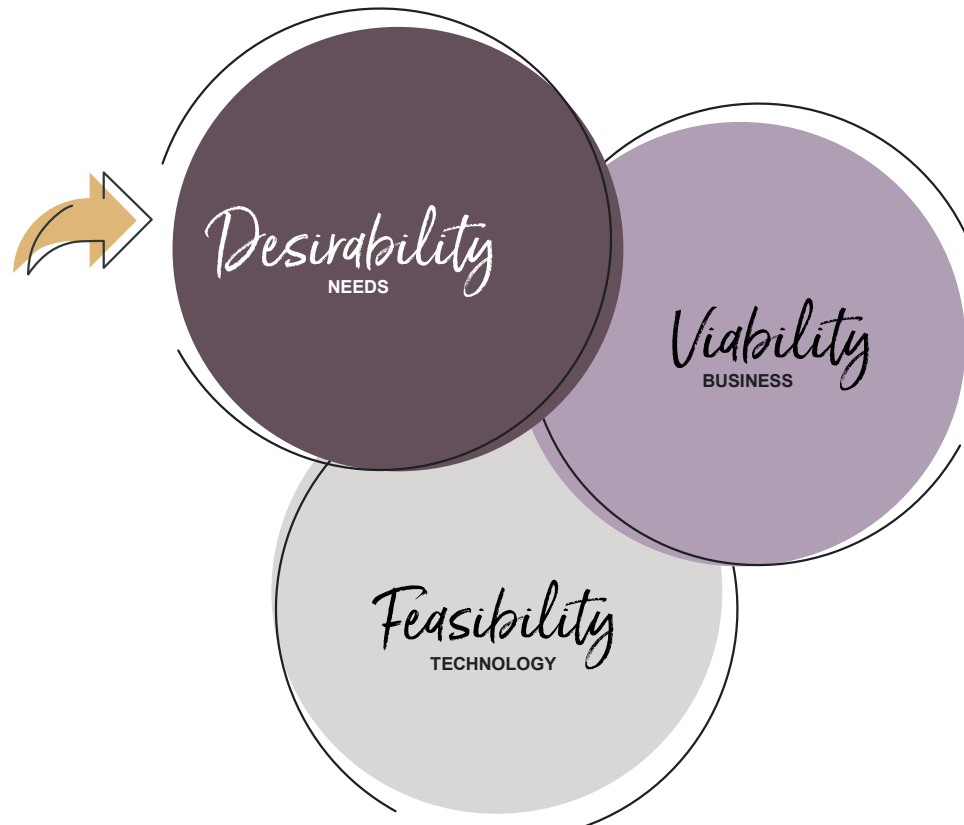

Mindset and process

Mindset and process

Everllence ■

We start here!

What user-group?

Understanding **Enterprise Users**

Everllence 

Enterprise users are not customers

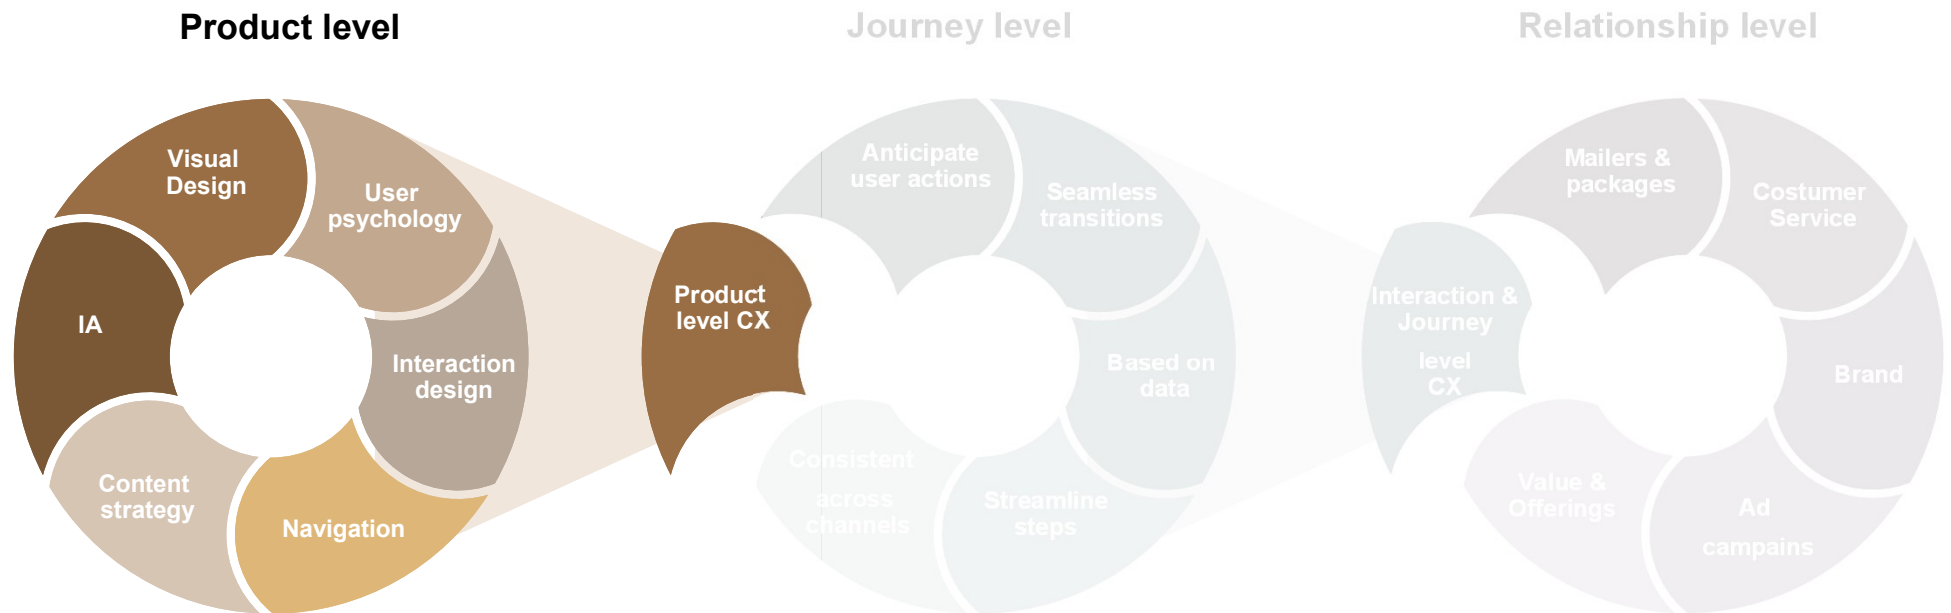

UI complexity leads to lack in usability

Enterprise users often face usability-related pain points

Usability can be enhanced through User-Centric Design

We will primarily focus on tools for product **level** in this course

GRAB A COFFEE AND STRETCH YOUR LEGS

Everllence 
Discover the power of AND

Mindset and process

UX research and testing

Attitudinal methods

“what users say.”

Behavioral Methods

“what users do”

Qualitative methods

Analyse non-numerical data to understand a concept in depth

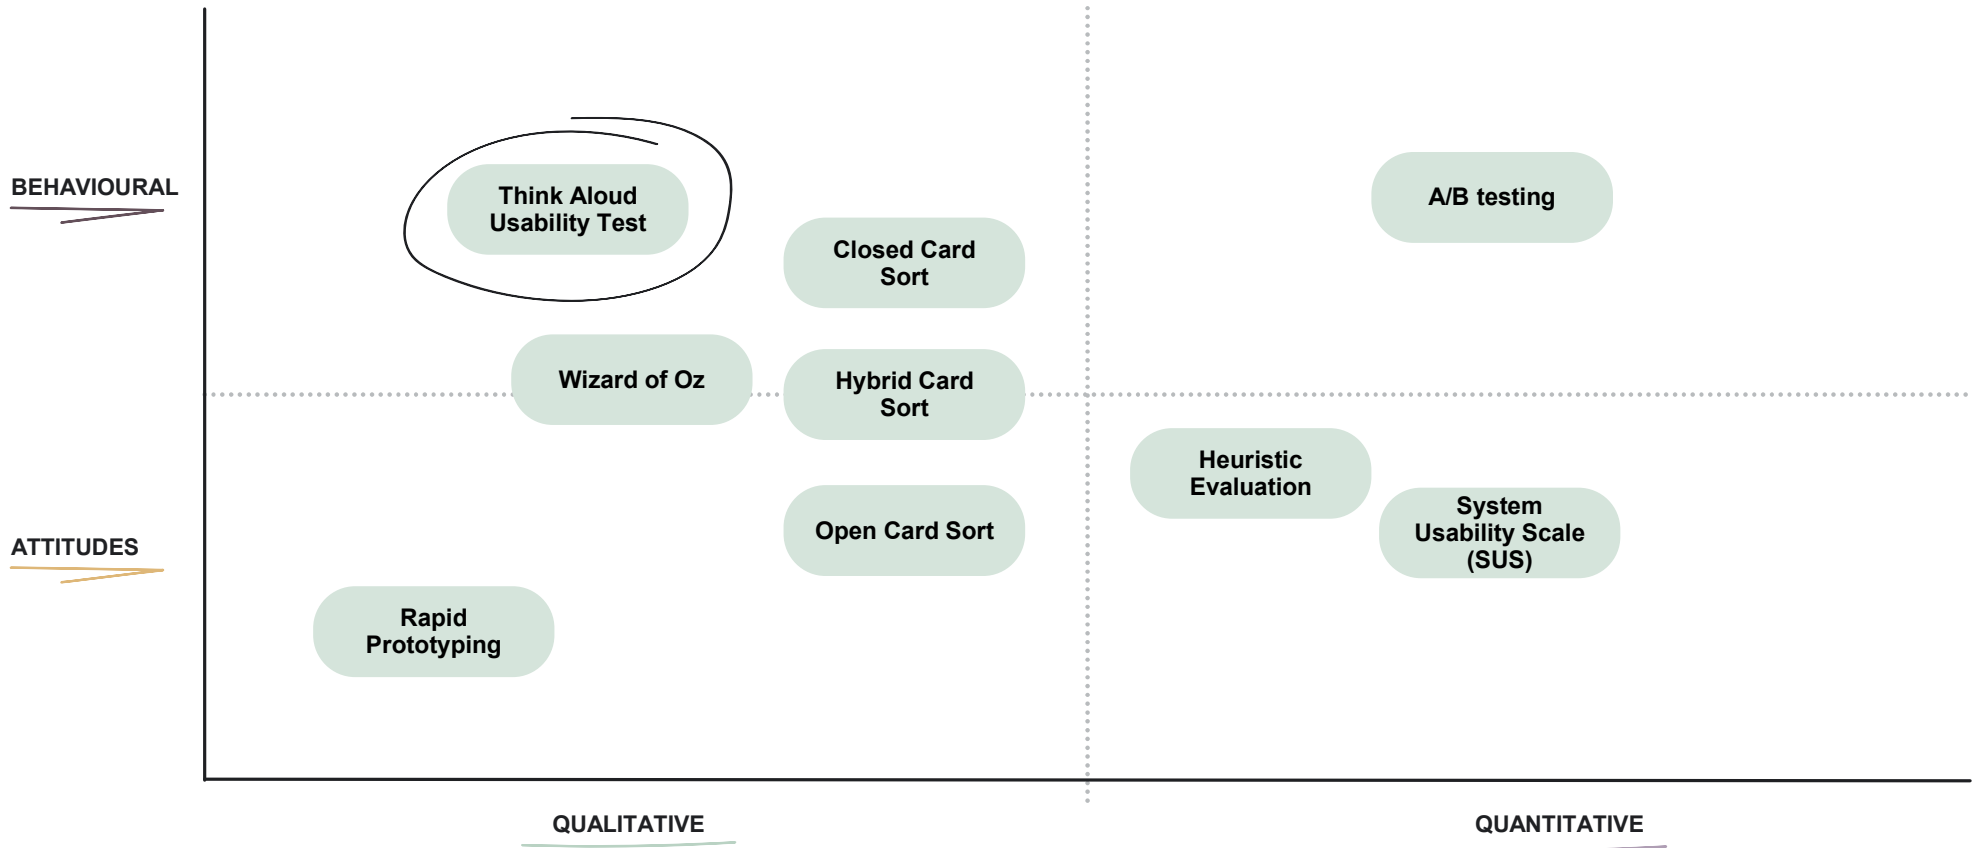

Quantitative methods

Analyse numerical data to identify patterns, test relationships and hypothesis

We have a big set of different methods to use, depending on what you want to test or better understand.

UX research and testing methods

Think aloud test

The purpose of a think out loud test is **to observe and understand users' thought processes as they interact with a system**. You facilitate a session where a user is trying out a task you created, while speaking out loud and the researcher is observing, listening and asking follow-up questions.

Things we considered before being able to conduct the test

The user group

**Aspects of the
system to test**

**Specific and non-
guiding tasks**

A small demo

→ **Of a think
aloud test**

Get up!
Let's meet in the
middle of the room

Exercise

— Prepare your own test

CONSIDER USERS

Consider who your users are, are they novice? Are they experts?

CONSIDER SYSTEM

Select what aspects of the system you want to focus on (e.g., navigation, task completion, understanding specific features).

CREATE 2 TASKS

Prepare 2 think aloud tasks, that can test this feature

CONSIDER WORDING

Make sure your task description is non-guiding.

Prepare think aloud test
on your own system
- use template

Follow up

— How was it preparing your own test?

GRAB A COFFEE AND STRETCH YOUR LEGS

→ What is going to happen...

Conduct the Think aloud test

Participants shifts and go to a facilitator with a computer

→ What is going to happen...

01

Read the task
aloud

02

Ask
participants to
think out loud,
of their
thoughts,
steps and
confusion

03

Observe and
note down
interactions
and issues.

04

Use the
guiding
questions and
clues if
needed

Follow up

— Think aloud test 2

IT'S TIME
FOR LUNCH!

Think aloud test

The purpose of a think out loud test is **to observe and understand users' thought processes as they interact with a system**. You facilitate a session where a user is trying out a task you created, while speaking out loud and the researcher is observing, listening and asking follow-up questions.

**Let's go
outside**

Interpreting the data and feedback

Methods for analysing findings

Everllence 

A set of these methods can also be found in the method book.

We have a big set of methods we can use depending on what we want to learn and what we want to use the learning for

Qualitative methods

Analyse non-numerical data to understand a concept in depth

Quantitative methods

Analyse numerical data to identify patterns, test relationships and hypothesis

→ We have
identified some
challenges

**Keep
focusing on
the problem**

Information Architecture

Information Architecture... is the **structure and organization of information** on a website. Think of it like an architect building a house. Before the house gets built, they'll map exactly what goes where.

Consists of two main components:

1

STRUCTURE

Which involves organizing content into categories, hierarchies, and relationships.

2

LABELLING

Which uses words to represent and classify these categories, hierarchies, and relationships.

→ Issues with your information architecture will (most likely) show up in a test like “Think Aloud”, as users will struggle with finding things on your site.

But how do you test your information architecture?

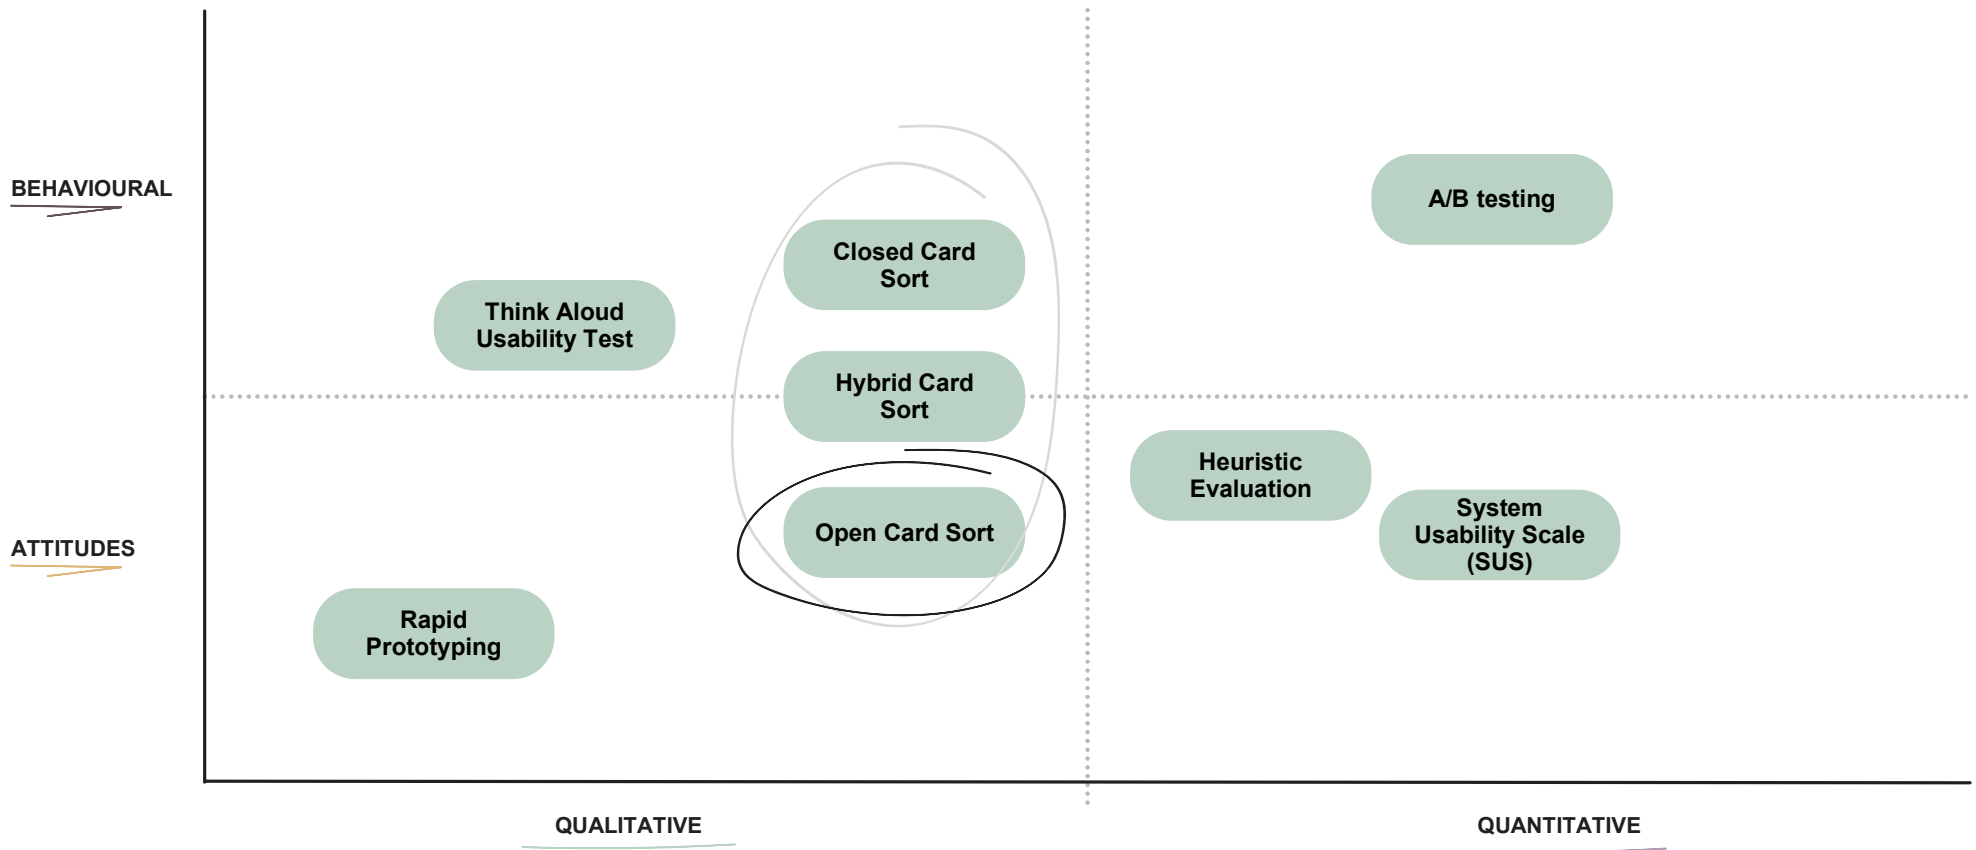

Card Sorting

The purpose of a card sorting is to gather insights into how users perceive and organize information. Card sorting is a testing method, designed for testing if the mental model of a user, matches the information architecture.

In your booklets we have 3 different variations

UX research and testing methods

Exercise

— Open card sort

Part 1: Card creation

→ **What is going to happen...**

1

You will be acting as card-designers/interviewers.

2

Find your computers and the system.

3

Fill out 1 card for each keyword of important features, navigation elements, menu items, etc

Follow up

- Open card sort

Part 1: Card creation

IT IS TIME FOR
A SHORT BREAK

Think Aloud - Template

Task
Inspirational facilitation questions
Navigation Clues
Task
Inspirational facilitation questions
Navigation Clues

Everllence

Exercise

— Open card sort

Part 2: Card sorting and labelling

→ What is going to happen...

Transition

Hand over your set of cards to the next table
(Clockwise)

→ What is going to happen (3/3)...

Sort & label the cards

You will now be acting as participants

Try to group them into categories/sections you think is right, based on the wording of these cards. **Use A2 sheets.**

Card sorting presentation

Follow up

- Open card sort

Part 2: Categorizing

Crystalizing findings from today

Let's revisit the expectations

THANK YOU
